

Semicoa Relocation Update – DLA Audit Status

Semicoa has completed the move to its new location having Wafer Fab, Assembly, and Test capabilities reside at OSI Optoelectronics, Inc. with Corporate Headquarters located at 12525 Chadron Avenue, Hawthorne, CA 90250. The company name, Semicoa and the Cage code, 34156, and your factory contacts all remain the same.

The original Semicoa equipment accompanies management and a core team of trained operators who made the transition to the new location. In addition, Semicoa now shares OSI Optoelectronics, Inc. corporate resources for Quality, Facilities, Compliance, and IT support.

Before the relocation, Semicoa created a significant amount of finished goods inventory consisting of die and packaged devices to support customer needs during the transition.

On January 19, 2024, Semicoa completed a successful DLA audit for QML re-certification of the Hawthorne, CA facility. Qualification lots for new packaged part production start immediately. In the meantime, Semicoa has been certified to support customer requirements for solder finishing and element evaluation for die orders for products in inventory prior to the completion of the packaged part re-qualification effort.

We expect to complete qualification for the Assembly and Test of all JAN quality levels no later than the end of 2024. Be sure to inform us of your critical requirements and we will make every effort to meet your needs.

We appreciate your continued support during this transition.
